

# Condos would loom over neighbors

At 36 stories, tower would be 2nd tallest downtown residential project in works

By Shonda Novak  
AMERICAN-STATESMAN STAFF

A dramatic change is coming to Austin's skyline, with plans under way for a \$60 million condominium high-rise that would tower 36 stories over downtown Austin's southwestern edge.

Developers expect to start construction in about a year on the tower, at West Third and Bowie streets.

The building would be the tallest of any type west of Congress Avenue and the second tallest among a wave of new downtown residential projects in the pipeline. The highest is a 41-story residential-retail-hotel skyscraper that developer Tom Stacy plans at Congress Avenue and Fifth Street.

Developers and city officials said the project represents the kind of density they want to encourage downtown.

But a neighborhood representative said that a 36-story building is not appropriate so close to residential areas and that the project will worsen traffic and parking problems in an already congested area.

Called Spring, the tower would be just west of the Gables West Avenue Lofts and two blocks south of Whole Foods's flagship store.

The building will have several levels of parking above and below ground, plus ground floor shops with 20-foot-wide sidewalks shaded by awnings.

Plans call for 220 condominiums priced from about \$200,000 to \$400,000, said Larry Warshaw, who is developing the project with Perry Lorenz, Robert Barnstone and Diana Zuniga.

Lorenz and Barnstone were partners in the Nokonah condominiums on North Lamar, Boulevard and West Ninth Street. Warshaw and Lorenz co-developed the Pedernales Lofts condo-

miniums on East Sixth Street. Zuniga, a well-known broker, also is a principal in the partnership that is selling the land.

Although some neighborhood groups have opposed other high-rise plans in the area, the developers say their tower would not block views of downtown or the state Capitol.

The project will require a zoning change because the tower will be 400 feet, more than three times the site's existing 120-foot height limit.

"There will always be folks who think a building is too tall," Lorenz said. "You have to weigh those personal preferences against city policy and good urban planning principles" that encourage density downtown.

Mayor Will Wynn said the project will mean a significant increase in tax revenue without requiring additional public investment in infrastructure or services. Barnstone estimated that the building would pay \$1.5 million a year in property taxes.

"That's tax revenue straight to the bottom line, to help pay for things like parks, libraries and public safety," Wynn said.

Environmental advocate Robin Rather said Spring dovetails with the region's long-term

*That's too close to the neighborhood with that kind of density. It's a small tract.*

**Richard McCown**  
Chairman of the Old West Austin Neighborhood Association

goal of reducing sprawl while encouraging more intense development in the central city.

"This is exactly the kind of concept that will help create a more compact city and hopefully take pressure off our more fragile Hill Country areas," she said.

Richard McCown, chairman of the Old West Austin Neighborhood Association west of Lamar, said residents will have "great concern" about the project's height and the additional traffic.

"That's too close to the neighborhood with that kind of density," McCown said. "It's a small tract, and the height is going to be significant."

Jeff Jack, past president of the Zilker Neighborhood Association south of downtown, said the

project could set a precedent for "intrusive buildings along the edge of a residential neighborhood."

Jack said he's also concerned about traffic, although the Spring developers say their project will generate a lot less traffic than would a commercial project, which could be built under the current zoning. They say many residents probably will walk to work and nearby shops and restaurants.

Barnstone often cites Vancouver, British Columbia, as a city that has embraced high-rise development while maintaining its scenic beauty and liveability.

Spring will be designed by Foad Rafii, a Vancouver architect, using design principles that maximize the amount of usable space on each floor.

Developers said that will help keep prices well below those of other new downtown condos, which average \$500,000.

Developers said there will be four to six units per floor but didn't have specific sizes.

"For the first time," Lorenz said, "living in downtown Austin will be a real option for teachers, firefighter, young professionals and middle-income families, not just the very wealthy."

A dramatic change is coming to Austin's skyline, with plans under way for a \$60 million condominium high-rise that would tower 36 stories over downtown Austin's southwest-end edge.

Developers expect to start construction in about a year on the tower, at West Third and Boylie streets.

The building would be the tallest of any type west of Congress Avenue and the second tallest among a wave of new downtown residential projects in the pipeline. The highest is a 41-story residential-vertical-hotel skyscraper by developer Tom Slacy plans at Congress Avenue and Fifth Street.

would be just west of the Gables West Avenue Lots and two blocks south of Whole Foods flagship store.

The building will have several levels of parking above and below ground, plus ground-floor shops, with 26,600-sq-ft of parking shaded by awnings.

Plans call for 220 condominiums priced from about \$200,000 to \$400,000, said Larry Washaw, who is developing the project with Perry Loreusz, Robert Barnstolz and Diana Zumlage.

Loreusz and Barnstolz were partners in the Nokomis condominiums on North Lamar Boulevard and West Ninth Street, Washaw and Loreusz co-developed Lip Federico's 175th Street Zilker on East Sixth Street. Zilker is a high-end, known by its address, 175th Street, in the partnership that is selling the land.

Although some neighborhood groups have opposed other high-rise plans in the area, the developers say their tower would not block views of downtown or the state Capitol.

The project will require a zoning change because the tower will be 400 feet, nearly four times the site's existing 120-foot height limit.

"There will always be folks who think building is too tall," Loreusz said. "You have to weigh those personal preferences against city policy and good urban planning principles that encourage density downtown."

Mayor Will Wynn said the project will mean a significant increase in tax revenue without

requiring additional public investment in infrastructure or services. Barnstolz estimated that the building would pay \$1.5 million a year in property taxes.

"That's tax revenue straight to the bottom line, to help pay for things like parks, libraries and public safety," Wynn said.

Environmental advocate Robin Rader said Sprong deals with the region's long-term goal of reducing sprawl while encouraging more intense development in the central city.

"This is exactly the kind of concept that will help create a more compact city and hopefully ease pressure off our more fragile Hill Country area," she said.

Richard McCown, chairman of the Old West Austin Neighborhood Association west of Lamar, said residents will have great concerns about the project's height and the additional traffic.

"That's too close to the neighborhood with that kind of density," McCown said. "It's a small tract, and the height is going to be significant."

Jeff Jack, past president of the Zilker Neighborhood Association south of downtown, said the project could set a precedent for "intrusive buildings along the edge of a residential neighborhood."

Jack said he's also concerned about traffic, although the Sprong developers say their project will generate a lot less traffic than would a commercial project, which could be built under the current zoning. They say many residents probably will walk to work and nearby shops and restaurants.

Barbara Binkley, city's Vancouver Urban Center, cites Vancouver's experience as a city that has embraced high-rise development with maintaining its scenic beauty and walkability.

Sprong will be designed by Ford Ruhl, a Vancouver architect, using design principles that maximize the amount of usable

space on each floor. Developers said that will help keep prices well below those of other new downtown condominiums, which average \$500,000.

Developers said there will be four to six units per floor but didn't have specific sizes.

"For the first time," Loreusz said, "I'm in a real option for teachers' families, young professionals and middle-income families, not just the very wealthy."
